

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a tool made out of top quality materials intended to endure the most demanding operations and work environments. This piece of equipment could enable the person driving to be able to operate the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms in order to facilitate much more accurate carrying and placement in a faster and more efficient manner.

The blade pocket is somewhat unique and enables the person operating it to be able to safely swing the forks into position without any fear of destroying the positioning cylinders. This could allow the driver the option to be able to perform independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into fork positioners on available units.
